KROWNE®

8” Center Wall Mount Faucet Installation Manual

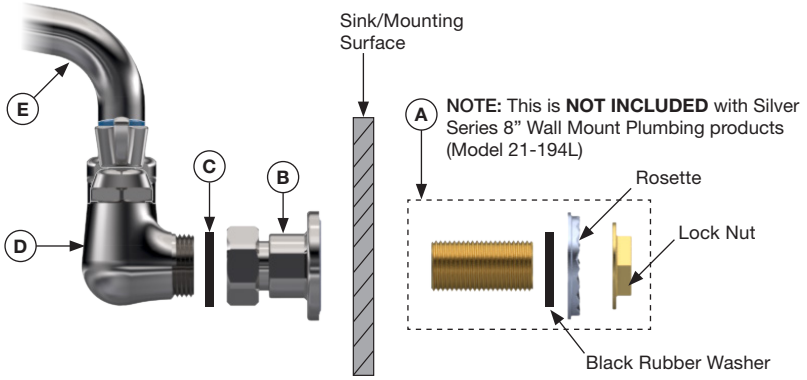

12-8 Faucets

SILVER SERIES

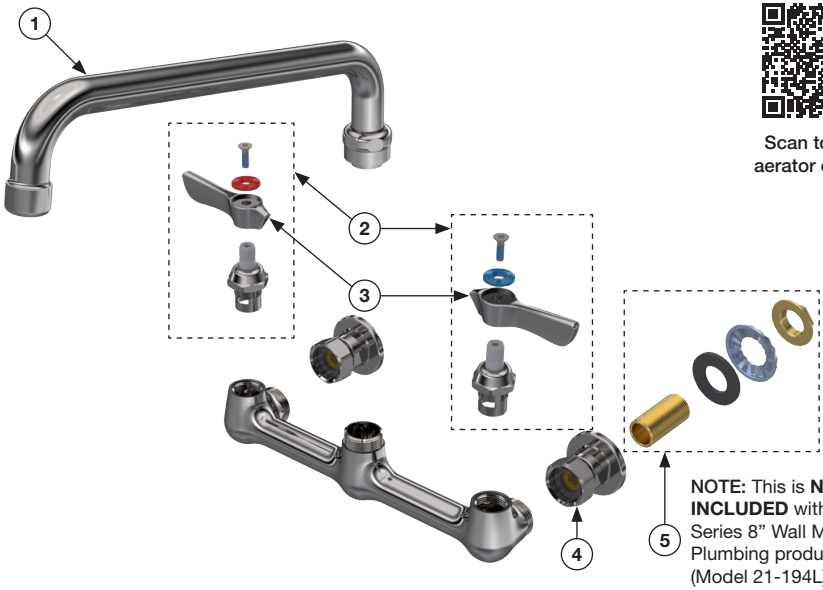

WARNING: Plumbing connections should be made by qualified personnel who will observe all applicable plumbing, sanitary and safety codes.

Note: Before starting installation, it is necessary to purchase a mounting kit. We recommend the Krowne's Mounting Kit for Wall Mount Faucets (model 21-194L). For a mounting kit with water lines, we recommend Krowne's E-Z Install Flexible Water Line Kit (model 21-445L). These kits do not use thread sealant tape or pipe joint compound. Kits come with 1/2" compression 90° fittings on one side and 3/8" compression fittings that secure directly onto the supply stops. These are available in 22", 24" and 30" lengths.

Installation Instructions

1. Turn off water supply at main source before proceeding with installation.
2. Remove the two 1/2" threaded nipples **(A)** from the wall mount kit (not included).
3. Apply thread sealant tape or pipe joint compound to one side of each of the two threaded nipples (you will apply to the other side after step #5 is completed).
4. Install the threaded nipples with the sealant into the two 1/2" female threaded coupling flanges **(B)** and tighten properly. It is important to know that the coupling flanges have eccentric centers. This means that if the holes for the threaded nipples are not exactly 8" on center, it allows you to adjust the center distance.
5. From the front of the sink, insert the threaded nipples into the faucet holes in the sink. Make sure the coupling flanges are turned so the brass nipples are at the 12 o'clock position. This is necessary to make sure the faucet is level.
6. Apply thread sealant tape or pipe joint compound to the other side of each of the two threaded nipples. This step is not necessary if you are using the Krowne E-Z install flexible water line kit, as these use compression fittings.
7. From the back of the sink, place the black rubber washer, rosette, and flange nut from the mounting kit onto the threaded nipples and tighten with a wrench.
8. From the front of the sink, insert the rubber washers **(C)** into the coupling flanges **(B)**.
9. Install the faucet body **(D)** onto the coupling flanges and tighten properly with a wrench. If the faucet does not fit on the coupling flanges, rotate the flanges to fit the faucet per step 5.
10. From the front of the sink, install the spout **(E)** and tighten properly.
11. From the back of the sink, install the water supply lines and tighten properly.
