Draft Cocktail System

Standard Features

- Can be installed in a walk-in cooler or a direct draw dispenser
- Prolongs shelf life of pre-batched cocktails while keeping it at optimal temperature
- Includes timer to control on/off cycle for the circulation pump
- Cocktail tank can hold up to 5 gallons
- 45 PSI Circulation pump for cocktail tank
- Connection kit with strainer for product dispensing
- Circulating tank height 24-3/4"

Specifications

PSI	▪ 45 PSI
Weight	▪ 17.5 lbs

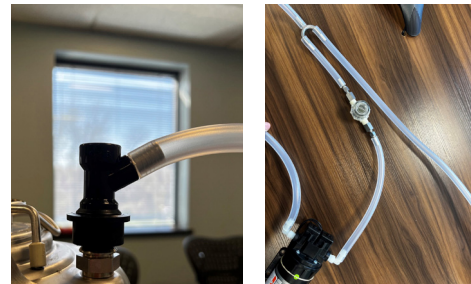

Kit Includes

- 5-Gallon circulating cocktail tank
- Circulation pump for cocktail tank
- Timer to control on/off cycle for circulation pump
- Connection kit for circulation pump
- Connection kit with strainer for product dispensing
- Connection kit for gas

How To Use

1. An outlet is required for the timer to plug into (preferably outside the direct draw box). The pump will plug into the timer, so you will need to drill a hole in the side/back of the box to fit the cord kit through.

2. The black liquid connection piece will connect to the liquid port on the corny keg. We recommend that the strainer be installed prior to the "Y" fitting. This way if there are particles in the cocktail, they do not go through the pump. The pump is not designed to have particles going through it.

3. From the "Y" fitting, one line will go to the faucet, and the other will go to inlet on the pump. The tubing with the grey connection piece will connect to the outlet of the pump, and the connection piece will connect to the lid.

4. The blue line is the gas line, and the grey connection piece will be connected to the gas port on the corny keg.
