

STAINLESS PROTECTIVE FILM

Protects against exposure to elements such as salt, flying debris and natural toxins

Protects the steel against light and medium scratches

Makes the unit extremely hydrophobic so water doesn't leave residue on stainless steel making the unit easy to clean and wipe down

Film also prevents dirt and oil from sticking to the stainless steel

Film acts as an extra moisture barrier, helping to prevent pitting and water spots

Film helps maintain the original refrigeration look by preventing dulling, discoloration or damage from environmental exposure

*Refrigeration still needs to be under overhang or awning
(Avoid the unit being in direct sunlight to prevent compressor from overuse.)

*Do Not Pressure Wash and restrain from using acidic chemicals.
